Capabilities Listing

Field Testing and Site Maintenance Services of Electrical Power Equipment System Protection and Controls

- Scheduled testing and maintenance services for electrical systems
- Installation, start-up and commissioning of new equipment
- Circuit breakers, switchgear and MCC's
- Generators and controls, auto switching
- Transformers, power cable and bus systems
- Protective relaying, variable frequency drives and PLC's
- Field and site testing of motors, motor contactors and starters
- Thermographic scan/infrared surveys
- Relay Upgrades
- Wind Farm Collector Substation Commissioning

Engineering and Design Engineering Services

- Substation and distribution system design, upgrades and additions
- Power factor and power quality analysis and correction
- System load studies and protective relaying coordination studies, NFPA70E Arc Flash Analysis
- Electrical inspections to determine compliance with codes and standards
- Ground systems analysis, testing and design
- Energy management
- Equipment failure forensics/arc flash hazard studies
- System Design Review and Verification
- FERC-NERC Services

In-Shop Remanufacturing Services

- Retrofit, repair, remanufacture and refit of circuit breakers and switchgear
- Motor control centers, starters and contactors
- Bucket retrofits and upgrades
- Matching line-up for legacy switchgear

Equipment Supply

- Motors and drives (VFD's)
- Vacuum/SF6 replacement circuit breakers
- Protective relays upgrade/door replacement
- Generators and controls
- Transformers—dry-type, padmount and substation
- Soft Starts, MCC's and control panels
- Match-in-line switchgear
- Ground-fault monitoring and protection
- Test equipment
- Advanced metering
- Motor and feeder protection relays
- Safety equipment
